

We have the solutions. You have the power. Together, let's save our One Earth.

Our climate and biodiversity crisis is complicated—and scary.

Take heart.

We've found solutions—and hope.

We've proven that if we act now, together, we can heal the Earth and reclaim our future.

And that action can be simple, effective—even joyful.

Along the way, we've broken ground, won awards, and earned respect from leading climate and biodiversity scientists, policymakers, and philanthropists.

Now we're making an impact.

28

Scientific reports developed and supported.

3.5M+

Individuals galvanized to protect the Earth.

\$8M+

Provided by the One Earth Community to support climate solutions.

Our Impact

First, we created the roadmap.

With leading scientists, we created the groundbreaking One Earth **Climate Model**, a roadmap that shows we can limit global average temperature rise to 1.5°C and avert ecological disaster. Building on the climate model, we created the One Earth **Solutions Framework** which indexes 76 specific solutions that need to be supported and scaled globally across the pillars of action:

Energy Transition

Transitioning the world to 100% renewable energy.

Nature Conservation

Protecting and restoring 50% of Earth's land and oceans.

Regenerative Agriculture

Transforming how we grow our food & fiber to restore life to the soil.

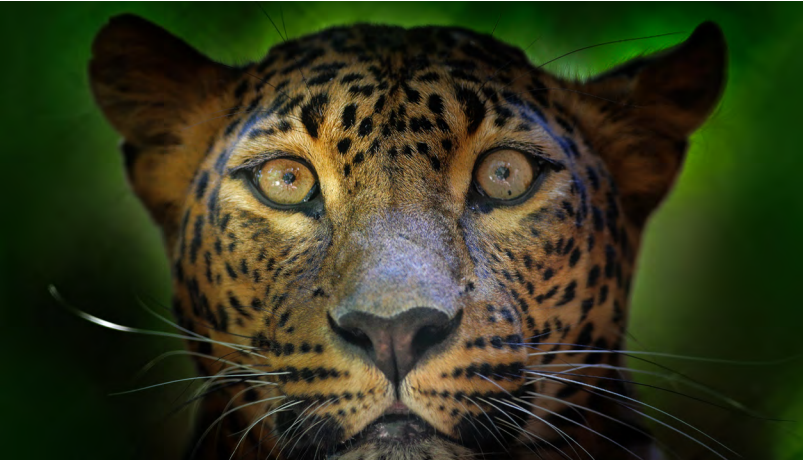

Then, we developed the blueprint.

With this science-based roadmap, we developed the award-winning **Global Safety Net (GSN)**, a blueprint for saving life on Earth. The GSN is the first-ever global-scale analysis of ecologically critical land that we must protect and restore in order to reverse biodiversity loss and rebalance our global climate system.

Next, we told a new story about hope and possibility.

With inspiring **stories** about the people around the world protecting nature and transforming our food and energy systems, accessible content about science-based solutions, and **interactive tools** to explore our Earth's profound biodiversity, we aim to empower everyone to believe that a vibrant future is possible.

Now, we're building the movement.

When you visit **OneEarth.org**, you can learn about the diverse solutions, support our science, explore the Earth's 185 unique bioregions, discover the people driving change from the ground up around the world, sign the Global Deal for Nature, and learn more about the people and practices saving our One Earth.

Empowering everyone, everywhere to heal the Earth and reclaim our future. Join us.
